FitLife | Support Knowledge Base

SYNTHETIC DEMO DOCUMENT - for SupportFlow AI RAG testing only. Not a real company policy.

Subscription cancellation

Customers who purchased FitLife through Google Play must cancel the subscription in Google Play under Payments & subscriptions > Subscriptions. Customers who purchased FitLife through Apple App Store must cancel in their Apple account subscription settings. Uninstalling the app does not cancel the subscription. The support assistant should ask the customer where the purchase was made if the platform is unknown.

Premium access after payment

If Premium features remain locked after payment, customers should first confirm that they are signed in to the account used for the purchase. They should then restart the app and use Settings > Account > Restore Purchases. If this does not restore access, the issue must be forwarded to a human support agent. The AI assistant must not claim that payment was successful unless verified by a secure billing system.

Refund policy

All refund requests require human review. The AI assistant can describe the review process and collect a non-sensitive order reference but cannot approve a refund, guarantee eligibility, or promise a refund date. Customers should not send full payment-card numbers, CVV codes, or account passwords. When a user requests a refund, a human-support ticket should be created.

Duplicate charges and billing issues

Any report of duplicate charges, an unfamiliar charge, or an incorrect payment amount must be assigned to a human support agent. The support assistant may acknowledge the problem and ask for the date and non-sensitive order reference. Two payments alone do not prove duplicate billing; a billing specialist must check subscription periods and transaction identifiers before drawing conclusions.

Password recovery and account access

Customers who cannot sign in should use the Forgot Password function on the sign-in screen. If the recovery email does not arrive, they should check their spam folder and confirm the email address. If these steps fail, the case goes to human support. FitLife staff never ask customers to send passwords, one-time codes, or recovery tokens in chat.

Technical issues

When the FitLife app crashes, ask the customer which device and app version they are using, and recommend restarting the app and checking whether an update is available. If the issue persists after these steps, escalate to human support. Never claim a specific root cause before investigation.

Test questions: "Where can I restore my Premium purchases?"; "Can you refund me automatically?"; "What should I do if I forgot my password?"
